##      intersect, setdiff, setequal, union
```

Experiment code is in the file `calibration_subsets_sizes_experiment.py`. This experiment trains CalibrationEnsemble on random subsets of different sizes picked from the neural networks training set. Each subset size is tested several times. The goal of the experiment is to determine the best calibration subset size.

CIFAR-10

```
base_dir_tc <- "../data/old/data_train_val_half_c10/0/exp_subsets_sizes_calibration_outputs/"
